

WSP COVID-19 Response

As a global leader in healthcare solutions, WSP is actively providing management and technical support services to our clients in both Canada and abroad as they respond to the rapidly evolving COVID-19 pandemic. WSP's team includes project managers, designers and field personnel who are adept at responding quickly to the challenges and needs of our healthcare clients during this challenging time.

The following are examples of the solutions we are currently providing:

- 1. Montreal, Canada**
WSP is process of working with the Hôpital Maisonneuve Rosemont and modular fabricators to design and construct a 33 Bed Isolation unit building addition. This facility will be rapidly deployed, with the design and construction targeting a 3-month completion. The structure will be adaptable—capable of accommodating future program changes once the pandemic is resolved.
- 2. Hong Kong, China**
WSP is providing MEP and Structural Engineering services alongside local contractors to build temporary quarantine facilities of 99 units and 120 units in Sai Kung and Pat Heung, respectively. The completion date for these two projects is the end of April 2020. Several of our engineers are also donating their personal time to chart out a solution to convert a standard 20-foot container into a negative pressure isolation room using the Modular Integrated Construction (miC) method. Once finalized, these units will be available for quick deployment to areas where they are needed the most.
- 3. Florida, USA**
WSP's Emergency Response & Logistics team is currently working with local governments and states within the USA to develop, build and manage POD (Point of Distribution) Coronavirus Drive-Thru Testing Sites. Up to 70 of these sites are anticipated to be stationed in Florida, and other states are expected to follow.

For more information on how WSP can support your organizational COVID-19 response, please contact:
